Frequently Asked Questions

What is Water Filtration?

Water filtration is the process of removing impurities, contaminants, and harmful substances from water to make it safer for consumption. This can be done using physical barriers, chemical treatments, or biological processes to eliminate bacteria, sediments, and pollutants.

What is a Water Filtration System?

A water filtration system is a set of devices designed to filter and purify water by removing contaminants, chemicals, and particles. These systems range from simple filters for drinking water to comprehensive systems designed for entire homes or businesses.

What is the Best Water Filtration System for My Home or Business?

The best water filtration system depends on the specific contaminants in your water and your daily usage. A professional water test can help identify the ideal system—such as reverse osmosis, UV sterilization, or whole-house filtration—for your specific needs.

How Much Does a Home Water Filtration System Cost?

The cost of a water filtration system varies depending on the type, size, specific water issues, and installation requirements. Please contact us directly for a consultation and personalized quote.

What is a Reverse Osmosis (RO) Water Filtration System?

Reverse Osmosis is a water filtration method that removes up to 99% of contaminants, including bacteria, viruses, and harmful chemicals, by forcing water through a semi-permeable membrane. It's widely used for producing exceptionally clean drinking water.

What is a Whole House Water Filtration System?

A whole house water filtration system filters water as it enters your home, ensuring clean, safe water from every faucet. These systems typically use multiple filtration stages to eliminate sediments, chlorine, heavy metals, and other contaminants throughout the home.

How Often Should I Replace the Filters in My Water System?

The frequency of filter replacement depends on your specific system and local water quality. Typically, filters should be replaced every 3 to 12 months to maintain optimal performance. Refer to your product's guidelines or contact our technicians for advice.

Can I Install a Water Filtration System Myself?

While basic systems might be suitable for self-installation, we recommend professional installation for advanced systems like reverse osmosis and whole-house filtration, ensuring they function correctly and safely from the outset.

Are Your Water Filtration Systems Certified?

Yes, all Aqualife filtration systems meet stringent local and international safety and performance standards. Our products undergo rigorous testing and certification processes to ensure top quality and reliability.

What Maintenance Does My Water Filtration System Need?

Regular maintenance is essential and includes periodic filter replacements, system checks, and sanitization procedures. Our after-sales services provide comprehensive maintenance support to ensure your system stays efficient and reliable.

Do I Need a Water Softener Along with a Filtration System?

If your water contains high mineral levels (hard water), using a water softener alongside a filtration system can help prevent scale buildup in appliances and pipes, improve water taste, and protect your plumbing. Our team can help determine if a softener is necessary for you.

Is Reverse Osmosis (RO) Water Safe for Daily Drinking?

Absolutely. Reverse osmosis water is exceptionally pure, as it effectively removes nearly all contaminants, including bacteria, viruses, and harmful chemicals. Additionally, our RO systems feature an advanced remineralization process that reintroduces beneficial minerals back into the water, ensuring it's not just safe, but also healthier and better-tasting for daily drinking.

[Water Treatment Plant](#)[Water Softener](#)[RO Drinking Water](#) Search What You Need**Water Treatment Plant****Whole House Water Filtration System**

Aqualife Luma effectively removes contaminants such as sediments, chemicals, heavy metals, iron, manganese, and unpleasant odors providing clean, safe, and high-quality water throughout your home.

[Overview](#) [Benefits](#) [Our Treatment System](#)**WHAT IS WATER TREATMENT****Why Do I Need a Water Treatment System?**

Our Aqualife Luma water treatment systems eliminate harmful substances such as chlorine, heavy metals, sediment, bacteria, iron, manganese, and unpleasant odors, ensuring your water is clean and safe for drinking, cooking, and bathing. With CleanFlow, you protect your health, improve water quality, and extend the lifespan of your plumbing and household appliances.

**Did You Know ?**

In Indonesia, more than 50% of clean water used by the public is actually contaminated with bacteria and harmful substances! This fact shows that water that looks clear is not necessarily safe to drink. Without proper filtration, water can contain bacteria, viruses, and harmful chemicals that may cause various diseases.

**The 2020 Household Drinking Water Quality Study**

found that 7 out of 10 households in Indonesia consume drinking water contaminated with Escherichia coli (E. coli) bacteria.

Many Refill Drinking Water Depots do not Disclose The

source of the water they use. This lack of transparency increases the risk of contamination from waste or other hazardous substances.

Benefits of Using a Water Treatment System**Cleaner and Safer Water**

Removes bacteria, viruses, iron, manganese, sediments, and harmful contaminants, providing safer and healthier water for your family.

**Improving Water Quality**

Eliminates unpleasant odors (such as chlorine and rotten egg smell), discoloration, and harmful chemicals, giving your water a clean, fresh taste.

**Efficient and Cost Effective**

Saves money by reducing your reliance on bottled water, providing a cost-effective long-term solution.

**Reliable and Durable System**

Built with advanced, reliable technology ensuring long-lasting performance and fewer maintenance concerns.

**Environmentally Friendly**

Minimizes plastic waste by eliminating the need for disposable water bottles, helping protect the environment.

**Trusted Technical Support**

Our responsive, expert after-sales support ensures your water treatment system operates flawlessly at all times.

**See the Aqualife Luma Difference****Prevent Scale, Rust, and Odor—Protect Your Health and Appliances**

Untreated water often contains minerals, iron, and other impurities that lead to scale buildup, rust, and stains on household appliances. With Aqualife CleanFlow, your water is purified leaving your faucets, showers, and fixtures clean, rust-free, and longer-lasting. Protect your family's health and your appliances with every drop.

Search What You Need

Water Softener For Your Home

**Goodbye Hard Water,
Hello Aqualife Luma Water Softener!**

The Aqualife Luma water softening system brings you a host of benefits, from softer skin and hair to cleaner, brighter clothes. Say goodbye to stains and scale buildup, and protect your household appliances from hard water damage, extending their lifespan.

Overview Benefits Our Treatment System

WHAT IS HARD WATER

Where Can It Be Seen?

Hard water contains high levels of minerals like calcium and magnesium, which can cause scaling, discoloration, and the deterioration of household appliances. It can also lead to dry skin, dull hair, and stained laundry.

**Did You Know ?**

Water hardness varies across regions in Indonesia. Studies show that up to 63% of households in certain areas use water with hardness levels exceeding safe standards. Hard water can significantly impact the quality of water in your home and increase maintenance costs.

**Benefits of Using a Water Softener System****Prevents Scale Buildup**

Protects pipes, faucets, and appliances from scale buildup caused by hard water, extending their lifespan.

**Softer Skin and Hair**

Helps retain moisture in your skin and hair, reducing dryness and irritation caused by hard water.

**Improves Detergent Efficiency**

Soft water allows detergents to work more effectively, leading to cleaner clothes, dishes, and surfaces with less detergent.

**Extends Appliance Lifespan**

Prevents mineral buildup in washing machines, water heaters, and dishwashers, reducing maintenance costs and extending their lifespan.

**Reduces Energy Consumption**

Improves water heater efficiency by preventing scale buildup, which in turn reduces energy consumption and utility bills.

**Prevents Stains on Dishes**

Eliminates cloudy spots and streaks caused by mineral deposits in hard water, keeping your dishes and glassware sparkling clean.

**Why Choose Aqualife Luma Water Softener?****Fresh Water, Long-Lasting Equipment**

The Aqualife Luma Water Softener is the perfect solution for your home or business. By eliminating excess minerals like calcium and magnesium, it prevents scale buildup in pipes, appliances, and machinery, ensuring they last longer. Softer water also improves skin and hair health, enhances the cleaning power of soap and detergent, and reduces maintenance costs. Whether you need it for your home or business, Aqualife Luma keeps your water fresh, your equipment running efficiently, and your environment cleaner and healthier.

Aqualife Reverse Osmosis System

Quality You Can Taste

Aqualife's advanced Reverse Osmosis (RO) system removes up to 99% of bacteria, viruses, chlorine, and heavy metals—delivering crystal-clear, great-tasting water on demand.

Overview Our Product Benefits Our Treatment System

FAQ: Is RO Water Safe?

Yes—our semi-permeable membranes remove 99% of dissolved solids and harmful pathogens. The result is pure, refreshing water that's safe for daily drinking.

How Reverse Osmosis Transforms Contaminated Water Into Purity

As water enters the pipe, it carries impurities such as bacteria, viruses, and particles. The membrane acts as a barrier, allowing only clean water molecules to pass through, while trapping contaminants and pollutants. This process ensures that the water exiting the system is filtered and safe to use, effectively removing various pollutants and producing clear, clean water.

Not just water filtration, but a healthier future.

ONYX WATER DISPENSER

The Onyx Water Dispenser is the perfect solution for a fast paced and health conscious lifestyle. Equipped with advanced filtration technology and four temperature options cold, room temperature, warm, and hot, it lets you enjoy pure, clean water in seconds.

AQUILLA 500G

The Onyx Water Dispenser is the perfect solution for a fast paced and health conscious lifestyle. Equipped with advanced filtration technology and four temperature options cold, room temperature, warm, and hot, it lets you enjoy pure, clean water in seconds.

Benefits of Using a Reverse Osmosis System

99% Contaminant Removal

Eliminates bacteria, viruses, chlorine and heavy metals.

Better Taste & Odor-Free

Filters out unpleasant flavors and smells.

Health & Hydration

Supports overall well-being with pure drinking water.

Compact, Modern Design

Fits seamlessly under sinks or on countertops.

Cost-Effective & Eco-Friendly

Reduces bottled-water expenses and plastic waste.

Reliable & Easy to Use

Simple installation and hassle-free maintenance.

Balanced pH & Rich in Minerals

Restores healthy calcium and magnesium for smoother taste and better hydration.

Why Choose Aqualife RO for Drinking Water?

On Demand Purity

Instant access to filtered water, no boiling, no bottles

Peace Of Mind

Industry leading membrane technology for your family's health

Save Money & Planet

Say goodbye to single-use plastics and high utility bills.

4 Manfaat memiliki Water Purifier di Rumah

Aqualife.com - 03/06/2025

Air sangat penting bagi semua kehidupan makhluk hidup, dari manusia, hewan, hingga tanaman. Ada banyak hal yang dilakukan orang memenuhi kebutuhan air mereka. Beberapa lebih menyukai membeli air kemasan dan sebagian memilih minum air keran karena lebih murah. Namun, masalah utama mengonsumsi air keran adalah memiliki rasa tidak sebaik air kemasan. Tentu ini membuat khawatir tentang potensi kontaminan dalam pasokan air dan mencari cara menghilangkannya.

Water purifier, yang juga disebut filter air atau sistem penyaringan air, menggunakan teknologi pintar khusus untuk menyaring pasokan air serta menghilangkan kontaminan seperti patogen, merkuri, timbal, arsenik, juga klorin. Penjernih air memiliki jaring atau membran seperti kain kasa yang menangkap partikel serta menghilangkannya dari air saat mengalir melalui filter, yang akhirnya menghasilkan air bersih dari mesin sehingga dapat menikmati minuman bebas kontaminan.

Musim Kemarau 2025 Sudah Dimulai Bulan Ini, Cek Kapan Puncaknya

Aqualife.com - 03/06/2025

Musim kemarau 2025 di Indonesia telah dimulai sejak bulan ini. Namun, musim kemarau dimulai secara bertahap di berbagai wilayah. Badan Meteorologi, Klimatologi, dan Geofisika (BMKG) memprediksi kemarau tahun ini lebih singkat daripada biasanya di sebagian besar wilayah. Walau begitu, risiko kekeringan dan karhutla tetap mengintai.

Menurut BMKG dalam unggahannya di Instagram dikutip Senin (14/4/2025), El Nino/Southern Oscillation (ENSO) dan Indian Ocean Dipole (IOD) sekarang ini dalam fase netral. Artinya, tidak ada gangguan besar dari Samudra Pasifik ataupun Samudra Hindia.

Kemudian, suhu permukaan laut di wilayah Indonesia lebih hangat dari normalnya, sehingga memiliki potensi pengaruh terhadap cuaca lokal sampai September.

Aqualife.com - 03/06/2025

Hujan sudah turun membasahi sebagian besar wilayah Kabupaten Ciamis sejak beberapa pekan terakhir.

Tapi sejumlah wilayah di Kabupaten Ciamis masih mengalami krisis air bersih. Warga tersebut masih mengandalkan kiriman air bersih dari BPBD Ciamis. Berdasarkan data dari BPBD Ciamis, ada tiga wilayah di Ciamis selatan yang mengalami krisis air bersih.

Pertama tiga dusun di Desa Langkapsari, Kecamatan Banjaranyar, kedua di Dusun Kertaharja, Desa Sukajaya, Kecamatan Pamarican. Ketiga Desa Sindangasih, Kecamatan Banjarsari. Warga mengalami krisis air bersih sudah sekitar 4 bulan terakhir. Untuk memenuhi kebutuhan air, warga mengambil dari sungai sekitar yang jaraknya beberapa kilometer. Ada juga warga yang berinisiatif membuat sumur-sumur dadakan di dasar sungai.
